TURN-KEY SOLUTION

COMPASS

The whole portfolio.
One glance.

Projects, health, schedule and staffing across all customers.
With an MCP server, so AI agents work in the same data.

- Health calculated from facts
- Schedule and staffing across projects
- MCP for Claude and other agents

A familiar service, with intelligence built into the core.

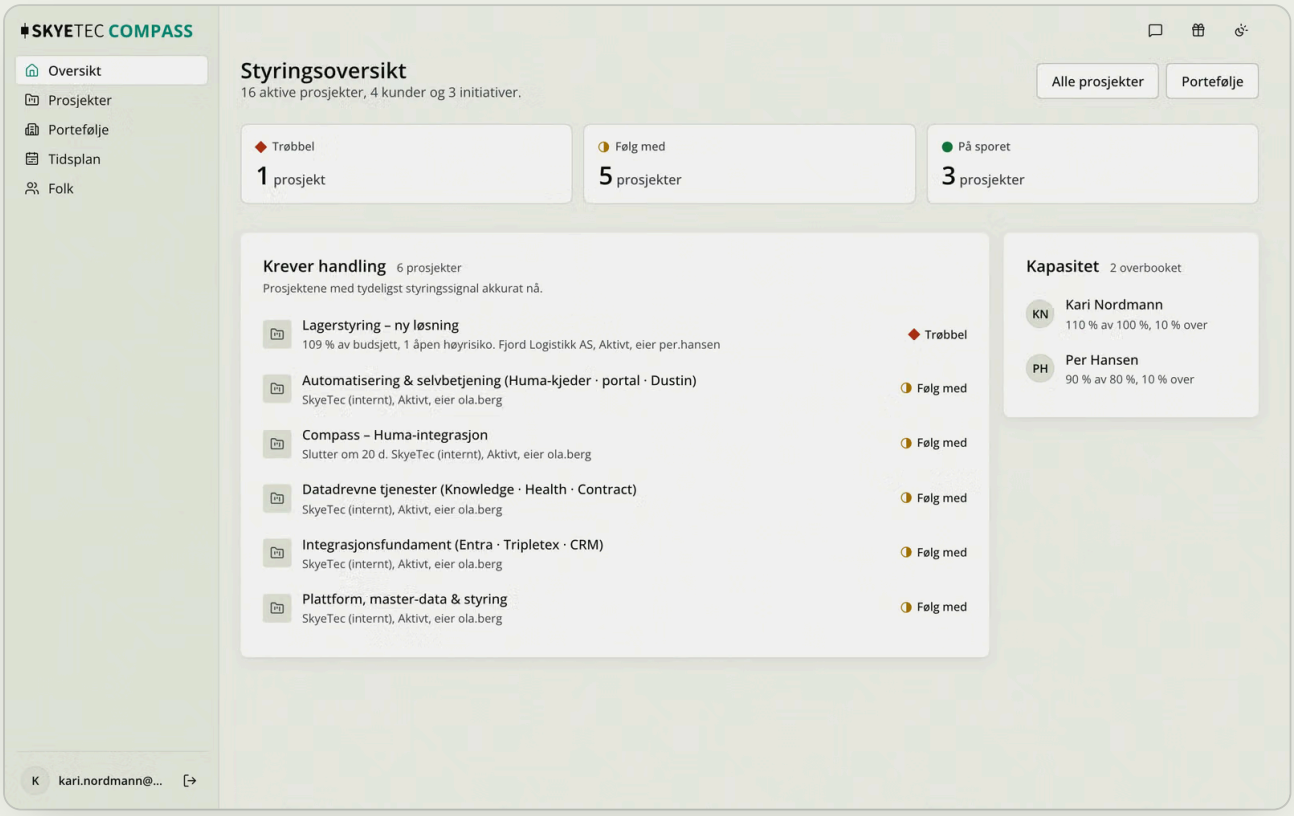

What it does

- **Governance overview**
  What needs action now, and why. Green, yellow, red or grey is calculated from budget, end date, milestones and risk, and never red on empty or fresh data.
- **Portfolio across customers**
  All projects in one place, internal ones too. The value lies in seeing them side by side.
- **Schedule and staffing**
  One shared timeline, with capacity and overbooking per person and month.
- **Project management**
  Milestones, risks (severity times likelihood), decisions that cannot be changed once accepted, status reports and teams. Everything written lands in a log that cannot be changed.
- **Connected to sales and accounting**
  Sold projects come from CRM via Tripletex. Internal projects are sent to Tripletex with one click.
- **MCP for agents**
  The same operations as tools for Claude and other AI agents. Sign-in goes through Entra, and a read key gives read access only.

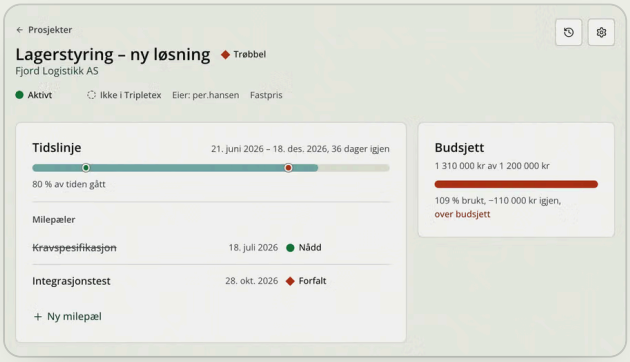

Works with

CRM | Tripletex | Brønnøysund Register Centre | Microsoft Entra ID | Claude (MCP)

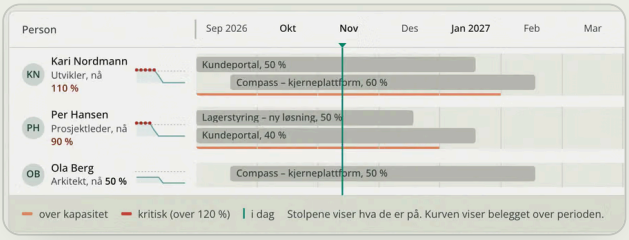

In use

The governance overview: the projects that need action, with the reason for their health, and who is overbooked.

The project page: marked «Trøbbel» (trouble), with 109 % of the budget spent and a milestone overdue.

Staffing: one row per person, and a line where the load goes over capacity.

Screenshots with example data.

Built on the harness

- **On the harness**

  The same governed agent layer under every service: each user's own access, a yes before changes, everything logged.

- **Where you already work**

  Log in at solutions.skyetec.ai, or use the service straight from Teams, Claude or SkyeTec Pulse.

- **Connected to the rest**

  One service or a bundle, linked to the systems you have through open interfaces and MCP.

Getting started

Try it free for 14 days. Pick a service or a bundle, and see how it works with your own data.
